In case you weren’t here on Friday,

• Course website: sierra.nmsu.edu/morandi/math210

• Get a copy of the syllabus from that site.

• Contact Dr. Morandi if you have questions.

• The Blackboard website for the course doesn’t have course materials.

• An i>clicker2 is necessary for this course. Other models won’t work.
If you do not have a clicker, make sure you get the i>clicker2 and not an older model.

right:  

wrong:
If you have not already done so, go to learn.nmsu.edu, logon, click on Math 210, and click on the “Register your clicker” link.
First Clicker Test

Turn your clicker on and make sure the frequency is set to AA.

You will receive the day’s participation points by answering the following questions. There are no right or wrong answers; these are not quiz questions.
Please respond to the following question.

Before this semester I used clickers

A never
B in one class
C in more than one class
We will do a sample multiple choice question. The clicker allows up to 5 responses.

In which college are you enrolled?

A Agriculture  
B Arts and Sciences  
C Business  
D Health and Social Services  
E None of the above

You can change your answer before the test ends by hitting a new response. Only your last response gets saved.
Enter a number. It can be your age, your favorite number, a randomly chosen number, anything you want. You can enter decimals. You should learn how to do that.

Once you hit your number, hit the send button. As with multiple choice, you can send multiple answers, but only the last one will be saved.
What is your major?

Again, after you finish typing, hit the send button.
If you have any questions about the clickers, ask Dr. Olberding or ask Dr. Morandi when he is back on Wednesday, or send him an email.

On Wednesday we will begin to discuss issues about infinity.
